FREEDOM comes ready to use out-of-the-box

The Only Wandering Prevention & Emergency Alert Solution with Fixed or Portable Safe Zones In and Outdoors.

allows a higher degree

of safe independence for those prone to wandering (Autism & Dementia) while giving caregivers and parents greater peace of mind. Set movable safe zones in or outdoors using the portable receiver. If these safe zones are crossed, the FREEDOM watch sets off a visual and audible alarm sending the wander's current location by email and/or text message directly to the caregiver, parent or call station. It works with a Smartphone or computer from anywhere in the world. There's also a built in panic button.

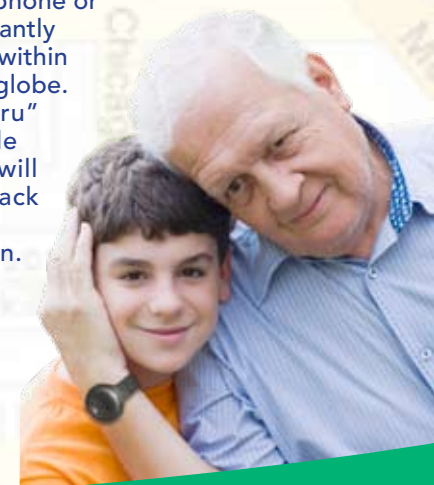

You can log into the FREEDOM portal from your Smartphone or computer to instantly locate someone within 10ft around the globe.

Works with Your Phone and Computer

The FREEDOM solution creates an RF (Radio Frequency) proximity zone around the portable receiver of 35 yards indoors, 85 yards outdoors. Outside of this proximity zone it becomes a GSM/GPS device so the wearer's location can be determined anywhere in the world from either a mobile phone or computer.

Log into the FREEDOM portal from your smartphone or computer to instantly locate someone within 10ft around the globe. You can text "wru" from your mobile phone and you will receive a text back indicating the wearer's location.

FREEDOM comes ready to use out-of-the-box after registration
